

# Global Challenges and Responsible Solutions

Find out more about [GCRS](#)

## Aims & Scope

*Global Challenges and Responsible Solutions (GCRS)* is a transdisciplinary, hybrid-access academic journal dedicated to advancing responsible management and global problem-solving through the lens of behavioural economics and social systems thinking. Building on the legacy of [Behavioural Economics and Social Systems \(BESS®\)](#), *GCRS* seeks to broaden recognition of the 'Second Track' methodology – an innovative approach to navigating complexity in policy and practice – and encourage its wider adoption across disciplines and sectors.

*GCRS* aims to become a leading global journal in general management, bridging academic insight and real-world impact. We invite contributions that challenge conventional economic thinking, especially the limitations of rational-scientific models and instead embrace behavioural, psychological and network-based approaches to understanding and solving wickedly complex problems.

Key areas of interest include:

- Behavioural economics and experimental economics
- Social networks and social cognition
- Judgment and decision-making, including the Second Track process
- Responsible management and sustainability practices
- Measurement and accountability of the UN Sustainable Development Goals (SDGs)
- Global grand challenges and systemic risk
- Impact of behavioural insights on law reform
- Influence of artificial intelligence on human decision-making
- Social systems perspectives on behaviour and change

## Submit your research

Submissions to *GCRS* are made using ScholarOne Manuscripts: Registration and access is available at: [mc.manuscriptcentral.com/gcrs](https://mc.manuscriptcentral.com/gcrs)
